COVID-19 data are reported as timely, accurately, and completely as we have available. Data are updated as we receive information that is more complete and will change over time as we learn more.

Demographics are currently filtered to confirmed cases (8,113).

Technical Notes
Lab data are reported electronically into the State's electronic laboratory reporting system, NBS (National Electronic Disease Surveillance Based System). Some labs are not reporting all demographic information. The quality and completeness of demographic information will be improved over time.

Daily lab data are updated each morning for the previous day.

Counts may be artificially low Saturday - Monday due to limited weekend reporting.

Death data are updated as deaths are reported, with most updates occurring in the afternoons.

As of 4/8/2020 cumulative daily death counts are displayed by date of death, rather than the date that the death was reported to the state. The total count for statewide deaths on the first tab may not equal the sum of the cumulative daily death counts because of cases where exact date of death is unknown or pending report.

As of 5/9/2020 daily new cases, daily new deaths, growth rates, hospitalizations, and test positivity rates are now available. New cases are attributed to the date they are reported. Deaths are attributed to the date of death, and counts may change retroactively as deaths are reported.

Growth rates represent the amount by which cases/deaths grow over time. The growth rate of COVID-19 may change over time due to actual changes in the growth or for reasons such as implementation of new testing strategies, changes to control measures that are in place, among other reasons. Growth rates are calculated as the difference between the total cumulative number of cases/deaths today from the previous day, divided by the cumulative number of cases/deaths the previous day.

The DHHS Office of Analytics, in conjunction with the Office of Public Health Investigations and Epidemiology and the Bureau of Health Care Quality and Compliance, both within the Division of Public and Behavioral Health, also maintain a facility-specific COVID-19 dashboard, available here: [Facilities Dashboard](#).

WHAT NEVADANS CAN DO TO HELP

Phase 2: SILVER STATE STABILIZATION

Continue to shelter in place if you are:
- 65 years or older
- pregnant
- high risk

Visits continue to be prohibited for senior living & long-term care facilities, nursing homes and hospitals.

WHAT TO EXPECT DURING A COVID-19 TEST

When you arrive at the testing site, you will be asked to provide an ID & insurance card, if any.

During the exam, you may be asked to blow your nose before they insert a swap deep in your nose. You may feel the urge to sneeze or gag.

Test is over in less than one minute.

Phase 2: SILVER STATE STABILIZATION

STEPS TO GET TESTED FOR COVID-19

1. Find a testing site near you
2. Stay in vehicle, roll down window
3. Get swabbed in less than 1 minute
4. Get results

If you go out to play, don’t forget to play your part to keep you and others around you safe by:
- Wearing a face covering in public
- Maintaining 6 ft. between you and others
- Limiting gathering to 50 people or fewer
- Stay home as much as possible
COVID-19 BY THE NUMBERS – USA

(Yesterday: +18,611) (Yesterday: +603)

Deaths per capita  Cases per capita

There are currently 1,681,619 cases confirmed in the US. With an estimated population of 322m, that equals to about 521 cases per 100,000 Americans.²

Number of confirmed cases per 100,000 Americans

- Fewer than 50
- At least 50 per 100k
- At least 150 per 100k
- At least 250 per 100k

Thank you, Stephanie, for all you do leading the Tonopah Volunteer Ambulance Service.
**U.S. STATE DEPARTMENT**

**LEVEL 4 – DO NOT TRAVEL**

The Department of State advises U.S. citizens to avoid all international travel due to the global impact of COVID-19. In countries where commercial departure options remain available, U.S. citizens who live in the United States should arrange for immediate return to the United States, unless they are prepared to remain abroad for an indefinite period.

At present the Department of State is making every effort to assist U.S. citizens overseas who wish to return to the United States. As the Covid-19 situation develops, our ability to provide such assistance working with commercial airlines or arranging for evacuation flights may become more limited or even unavailable.

In recent weeks, commercial airlines have significantly reduced flight schedules and countries have closed airports and borders with little advance notice. If you wish to return to the United States, you should make arrangements to do so now and contact the nearest U.S. Embassy or Consulate for assistance as needed. There is no guarantee that the Department of State will be able to continue to provide repatriation assistance and transportation options to the United States may be unavailable in the future. If you choose to remain overseas, you should be prepared to remain where you are for the foreseeable future. U.S. citizens who live abroad should avoid all international travel.

**CENTERS FOR DISEASE CONTROL**

**LEVEL 3 – AVOID NONESSENTIAL TRAVEL**

- Widespread ongoing transmission of a respiratory illness caused by the novel coronavirus (COVID-19) is occurring globally.
- CDC recommends that travelers avoid all nonessential international travel.
- Older adults and people of any age with serious chronic medical conditions are at increased risk for severe disease.
- There may be limited access to adequate medical care in affected areas.
- US residents may have difficulty returning to the United States.
- Travelers should avoid contact with sick people and wash their hands often with soap and water for at least 20 seconds. If soap and water are not readily available, use an alcohol-based hand sanitizer that contains at least 60% alcohol.
- All international travelers should stay home for 14 days after returning from travel, monitor their health, and practice social distancing.
